

(Q1)

App No	Event Time	Event
1001	21/07/23	Start event
1001	22/07/23	Hold
1001	23/07/23	Comment
1001	24/07/23	Comment
1001	25/07/23	Release
1001	26/07/23	End event

Sol

Step 1:- Get all the events between start & end events.

→ Getting the dates between the start & end event
where we consider the first start event &
last end event

Step 2:- Fetch the Hold & Released date to calculate the date diff

→ Getting 2 rows which are hold & release records.

Step 3:- Find the number of times the hold events has occurred
Find the datediff between the first hold & released

→ From the second step 2 we get the events date
for hold & release events & with that we can
find the hold event date & release event date
using this we can find the datediff.
